

## **ALLERGIIST INFORMATION FOR ALLERGEN IMMUNOTHERAPY AND OTHER INJECTION ORDERS**

### **Allergen Immunotherapy**

Allergen immunotherapy is administered by the Wilce Student Health Center in accordance with the written and signed orders of the patient's prescribing allergist. The ***Allergen Immunotherapy Administration/Order Form*** serves as these written and signed orders. Your patient will not be seen or evaluated without your written orders, although a patient may schedule an appointment for the purpose of receiving symptomatic treatment. Our nurses have standing orders for emergency situations in the event of adverse reactions. Should such a problem arise, our physicians are available for appropriate emergency treatment.

Please complete the following three forms. Our nurses will not administer allergy injections until all forms are received.

- Allergen Immunotherapy Administration/Order Form
- Referring Allergist Agreement
- Required Information for the Administration of Allergen Immunotherapy form

Mail forms and allergen vials to the Wilce Student Health Center at the following address:

Wilce Student Health Center  
Attention: Allergy Injection Nurse  
The Ohio State University  
1875 Millikin Road  
Columbus, Ohio 43210  
Phone: (614) 292-5729/Fax: (614) 247-8288

Allergen vials can also be sent with the patient to our facility. These vials are stored in our Allergy Injection department, and the patient may request that vials be released to him/her as needed for injections during times away from the university. If a patient fails to appear for injections for more than 90 days, the vials will be placed on hold and either returned to the prescribing allergist or discarded.

### **Other Medication Injections**

Wilce Student Health Center requires an assessment by one of our providers for the administration of other injectable medications. Students receiving ongoing medication injections are advised to schedule an appointment with a provider by calling (614) 292-4321. Documentation of the underlying diagnosis and previous treatment will be needed, and the patient should have that information available at the time of the appointment with our provider. For certain high-risk injectable medications, the provider may need to refer the patient to an appropriate local consultant for further evaluation and/or administration of that medication.
